Education

DigitalCrafts - Full-Stack Software Development Programer   *Aug-Nov. 2022 -* **Atlanta, GA**

- Full Stack Web Developer with experience with Python, JavaScript, HTML, and CSS
- Included work with javascript frameworks like Node.js and React
- Experience with PostgresSQL database and sequalize, as well as setting up backend servers with Express

Projects

Doggy Dj   *Doggy-dj.netlify*   *ReadMe*

Description: Doggy DJ is a music playback application themed around dogs. This app includes the ability to reverse, pause, play, or fast forward the current song that is being playing. Each song clip along with a gif as well as a fact located a the top of the page are all related around dogs. The purpose of this dog themed app was for to have a fun app.

Role: Along with the basic responsibilities when working in a team, my main role in the creation of this application was using the Howler package to utilize mp3 files to skillfully handle music being played. I also had to ensure the API call were working properly as well as leading in the javascript functionality of the app.

Val-Stats   *Valorant-stats1*   *ReadMe*

Description: Val-Stats is a clone of stat trackers popular among many first-person-shooter video games. Along with the Home page the register, login, and stats page were made from scratch. The functionality of the app is very simple as it allows users to create new accounts and login into those said account to view their stats. Some key features in the app include user authentication as well as uses of a database.

Role: In this application my role was to build up the logic in javascript for the flow of the website along with setting up the foundation. With a hand in the deployment of the front-end browser through EJS, creation of the back-end side of the server with Express, and use of a PostgresSQL Database I displayed diversity from working on both sides of the stack.

Skills

Python, JavaScript, HTML, CSS, Flexbox, Bootstrap, Node.js, Express, Sequelize, PostgresSQL, EJS, React, Agile, Jira, Heroku
